### SECURE ALIGNMENT SYSTEM

### ALUMINUM SKINNED FR PANELS

### CUSTOM SIZES AVAILABLE

### VARIOUS FINISH SURFACES

### NO SCREW TOP SURFACE OPTION

### CARTING SOLUTIONS AVAILABLE

### SOUND-DEADENING OPTION

PRG's SpeedDeck™ deck track platforms bring an entirely new dimension of creativity and possibilities to an already versatile system. With stock sizes for straight deck tracks and custom profiles just a call away, our deck track platforms can bring the creative needs of any production to life. The platforms feature the same proprietary aluminum extrusion profile and modular components as the solid platforms, creating a truly customizable system.

Each platform secures via coffin locks and a set of robust alignment features. The platforms quickly and securely lock together in the same place, every time.

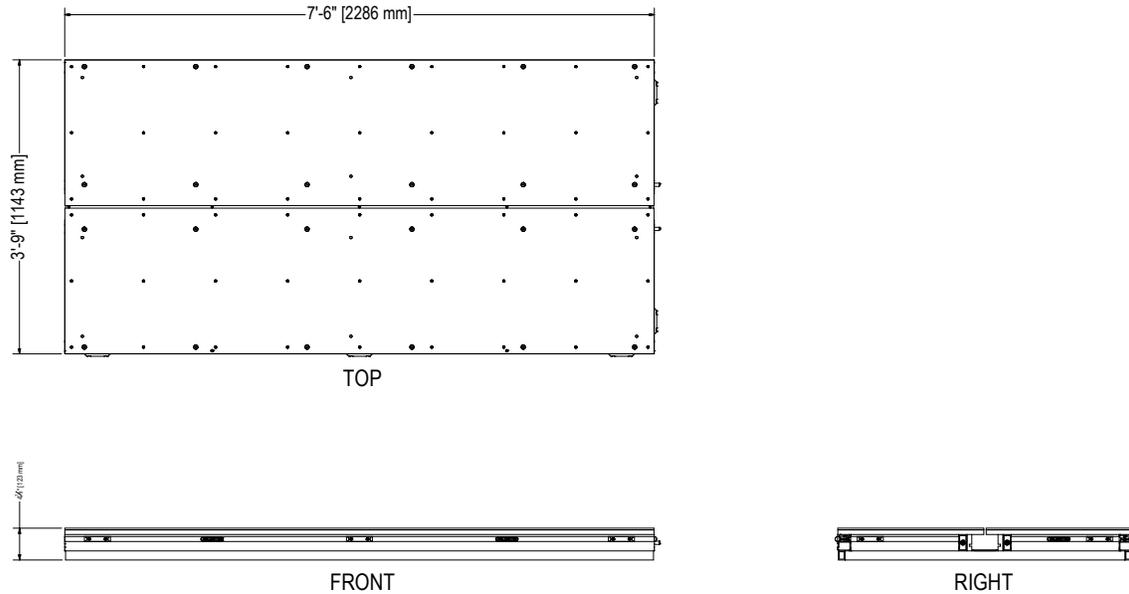

The plywood lids are high quality furniture grade birch, laminated with an aluminum backer, providing a superior fire-barrier. Several finish surface options are provided: EPG is the most common, but we offer bare plywood for customer supplied finish materials, Marley laminated plywood, smooth-finish (no top-screws) options, and custom materials as per client specifications.

The legs are quickly installed and removed for compact storage during transport and fast deployment. Optional leveling legs provide leveling access from above the deck with commonly available hex keys. We've assured the SpeedDeck™ components are user-servicable, with replacement items ready to ship. This ensures minimal downtime no matter what the road throws at you.
