

BellyBanner – Wireless LED panel

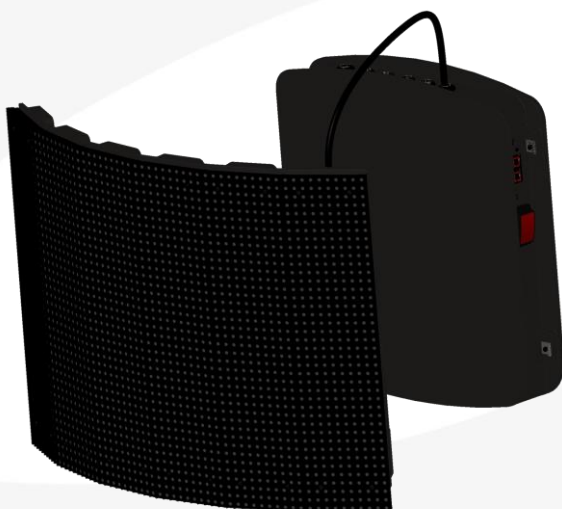

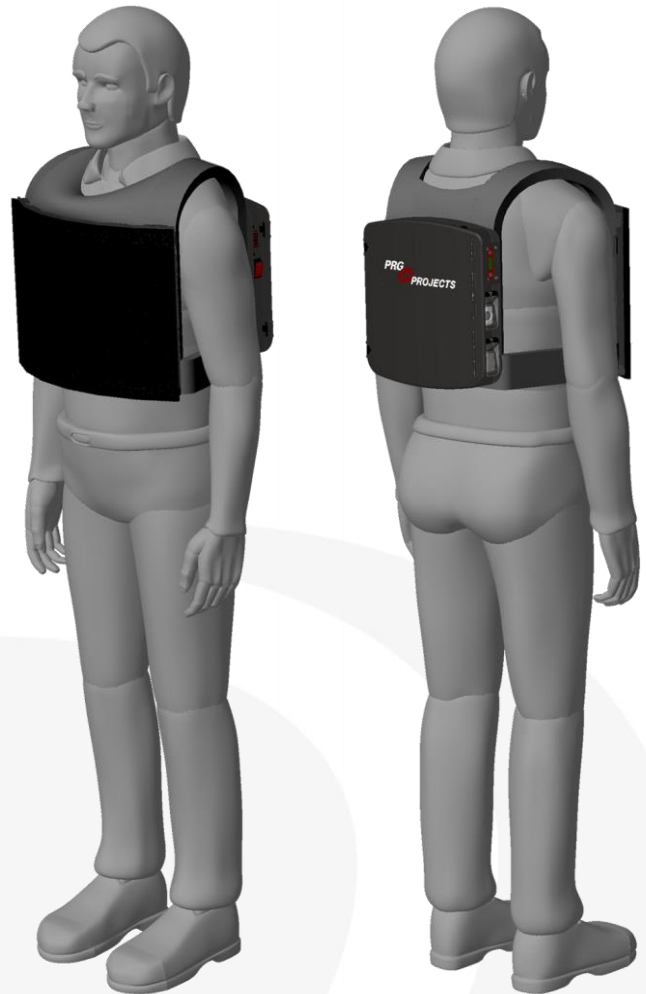

The BellyBanner has been developed by PRG Projects and is a highly innovative product with numerous application possibilities.

Each unit has a wireless control unit and is extremely versatile if featured by performers during a choreography, be it during a sports- or any other type of event.

Due to its small mediaserver integrated in the control backpack, you can display text and/or image content on the BellyBanner.

With its brightness of 6000 nits, it can also be applied in full daylight.

For more information or if you wish to showcase this product during one of your events, please contact your PRG Projects Account Manager.
