Mbox® Studio v4.2

Mbox® Studio v4 is a feature-rich media server application based on PRG’s Mbox Designer v4 software. With the release of v4, the Mbox software has been modernized and improved. The all-new user interface makes configuration easier, and a complete rewrite of the playback engine provides significant performance gains. For the first time, Mbox Studio can handle 4K playback and output. Studio v4 can have up to eight independently mastered outputs, and the new output and mix setup options make Mbox incredibly flexible.

The Mbox Studio software operates identically to the Mbox Designer software in setup, playback, effects, and transition functions. Mbox Studio can be programmed and operated directly from moving light consoles (Art-Net or sACN), allowing ease of coordination between video/image effects and lighting cues. Studio can also be controlled by Mbox Director, a simple yet sophisticated GUI application that allows for cue creation with triggering by timeline, MIDI, OSC, or Art-Net/sACN. The combination of Studio and Director creates a powerful media server solution even on a laptop. Whether used with Director or a console, Mbox’s ease of use and speed of programming are second to none.

Like Mbox Designer, Mbox Studio includes pixel mapping with Art-Net, sACN, or KiNET output, mastering, and merging. Studio also includes Syphon input/output and CITP for media thumbs and feedback to consoles or visualizers.

Mbox Studio v4 is designed as a compact but fully-featured media server for both big and small productions and offers a strong feature set at a moderate price point.

Software & Hardware Requirements

The Mbox Studio v4 software will run on any 64-bit Intel Apple Mac computer (MacBook Pro, MacBook, Mac Mini, Mac Pro, etc.) using OS X 10.9 Mavericks or newer versions of the operating system.
