**Manufacturer:** PRG

**Subject:** New 3.6.1 Features & Enhancements

**Bulletin NO:** MboxStudio-001

## New 3.6.1 Features & Enhancements

---

- + Added support for USB dongle software licensing
- + Expanded multi-head, keystone, and warp capabilities through Mbox Remote
- + Added “Show Logs” commands to Mbox Daemon and Mbox Remote
- + Added support for per-layer texture sizing
- + Numerous User Interface revisions to Mbox Remote
- + Optimization of video inputs

### Corrected Issues

Bug fix highlights since v3.6:

- + r3744 – fix rescan issue with spaces in drive names
- + r3745 – fix Daemon issue with folder aliases and thumbnails
- + r3747 – fix issue with logs when drive names have spaces
- + r3777 – added missing image units 48, 51, 52
- + r3797 – generate thumbs now performs media rescan
- + r3839 – fix text offset issues in Remote
- + r3840 – fix for lost vignette values in Remote
- + r3894 – fix issue with vertex array compiler when drive names have spaces
- + r3915 – fix for misplaced license files on Lion/Mountain Lion systems
- + r3932 – fix for snow and multiscreen dynamic gobos
- + r3957 – fix for mesh points on rotated topo objects

## NEW Feature Descriptions

---

For the Mbox Designer and Mbox Studio applications, version 3.6.1 is primarily a maintenance release. This version adds support for dongle-based licensing, direct access to log files from the source applications, per-layer texture sizing (as opposed to one texture size for all layers), and some minor optimization of the Decklink video input code. A number of bugs related to user installs on computers that may have an unexpected drive structure are also included.

The majority of enhancements have been made in the Mbox remote application to expand and clarify the user interface. Users now have access to the Projection Editor window, which allows for simple multi-head, keystone, and warp setup with Mbox Studio, and more advanced projection-mapping tools with Mbox Designer.
